

## Other Ways You Can Help

While making a fitting memorial tribute for a beloved pet patient is one way you can support our mission, you can also:

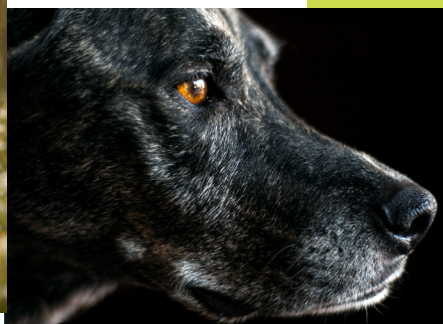

- Sponsor our national and/or local events
- Follow us on social media to spread awareness
- Invite your circles to participate in our efforts
- Create a fundraiser unique to your practice, etc.

## Pet Memorial Program for Veterinary Practices

Make a fitting memorial tribute for a beloved pet patient while supporting our mission.

ACF is dedicated to finding new treatments and eventual cures for cancer in both pets and people by funding comparative oncology research, the study of naturally occurring, similar cancers in people and their pets.

Join us to **unleash a cure.™**

Help Us to  
**Unleash a Cure™**

## Our Heritage

When you make a tribute memorial gift to Animal Cancer Foundation (ACF) on behalf of your practice, you allow us the privilege of **commemorating the bond you have with the pets and families you serve.**

We simplify the process with our online donation form, so you can focus on delivering veterinary care to the community.

And together we are all helping to speed the development of personalized and highly effective new, targeted therapies to the clinical setting by supporting comparative oncology research.

To start giving today visit:

### Since 1999,

ACF has been singularly focused on funding the **best early-stage comparative oncology research** to increase scientists' knowledge of cancer as a disease, to allow comparative researchers to develop basic science data that warrants investment from government and institutional funders, to catalyze successful development of new therapies for both veterinary and human patients, and to discover cancer prevention strategies for all.

#### **Our focus allows us to:**

- Enable comparative oncologists to build scientific evidence, conduct robust clinical trials, and generate cancer genomic datasets to integrate into the human cancer drug development pipeline.
- Ensure that ACF funded research is best-in-field early development that will be poised to attract funding.
- Speed development of personalized highly effective new, targeted therapies to the clinical setting for pets and people.
